

# ***IMPLEMENTATION OF THE ENERGY STRATEGY 2050 IN PUBLIC TRANSPORTATION PROGRAMME ESPT 2050***

## ***MANAGEMENT SUMMARY, ACTIVITIES UP TO 2018***

The programme «Energy Strategy in Public Transportation» (ESPT 2050) strives to improve energy efficiency in public transport and encourage the sector to increasingly cover its energy needs using renewable sources, thereby contributing to the federal government's energy strategy and boosting the industry's competitiveness.

The programme allows public transport companies to tap into funding, expertise and a network of contacts enabling them to identify attractive measures and implement these themselves. The programme is designed to serve as a catalyst and enabler.

Since its launch in 2013, 67 projects with a total funding volume of over CHF 30 million have been initiated. The FOT contributes up to 40% of non amortisable costs of each project. So far the emphasis has been on heating, ventilation and air-conditioning of vehicles, economical driving and rail infrastructure.

The program is aimed at the full spectrum of stakeholders active in the public transportation ecosystem and covers all modes of transport used in Switzerland. Information about the programme and the project calls can be found at [www.bav.admin.ch/energie2050](http://www.bav.admin.ch/energie2050).
